

PROPOSAL DOCUMENT

Eco Dry Cleaners Web App Platform

Client Documentation & System Overview

1. Introduction

The **Eco Dry Cleaners Web Platform** is a modern, eco-friendly digital system designed to help customers easily book laundry services, track their orders in real time, and make secure payments online.

The system is built as a **fully responsive web application**, ensuring seamless use across mobile, tablet, and desktop devices.

Its main goal is to:

- Simplify laundry service bookings
 - Improve order transparency through tracking
 - Enable secure and fast online payments
 - Enhance customer experience through automation
-

2. System Overview

The platform is divided into **four main user sections**:

1. **Public Website (Landing Pages)**
2. **User Account System**
3. **Customer Dashboard**
4. **Admin Management Panel**

3. How the System Works (User Journey)

Step 1: User Visits the Website

Users land on the homepage where they can:

- Learn about services (wash & fold, dry cleaning, ironing, etc.)
- View pricing and process steps
- Navigate to booking or tracking pages

Main Action Buttons:

- **Book a Service**
 - **Track Order**
-

Step 2: Account Creation & Login

To access booking and tracking features, users create an account.

Features:

- Email/phone registration
- Secure password creation
- Login authentication (simulated using LocalStorage)
- Password visibility toggle
- Remember me option

Once logged in, the user is redirected to the **Dashboard**.

Step 3: Customer Dashboard

The dashboard is the central control panel for users.

It includes:

-  Order summary (total orders, active orders, completed orders)
-  Booking history
-  Active order tracking status
-  Payment status updates

-  Notifications panel
-  Profile settings

The dashboard updates dynamically based on user activity.

Step 4: Booking a Laundry Service

Users can place a new laundry order through the booking page.

Booking Process:

1. Select service type:
 - Dry Cleaning
 - Wash & Fold
 - Ironing
 - Express Laundry
2. Choose package:
 - Standard
 - Premium
 - Express
3. Select:
 - Pickup date
 - Delivery date
 - Pickup location
4. Enter:
 - Clothing quantity
 - Optional images of clothes
5. Apply coupon code (optional)
6. System automatically:
 - Calculates total cost in real-time
 - Generates a unique Order ID
 - Saves booking data locally
7. User confirms booking

A confirmation popup is displayed after successful submission.

Step 5: Order Tracking System

After booking, users can track their laundry progress.

Tracking Stages:

1. Order Received
2. Pickup Scheduled
3. Laundry Processing
4. Quality Check
5. Out for Delivery
6. Delivered

Features:

- Progress bar animation
- Status timeline updates
- Estimated delivery time
- Order ID-based search system

Users simply enter their Order ID to view real-time status.

Step 6: Payment System (Simulated)

The platform includes a secure checkout interface.

Supported Payment Methods:

- M-Pesa

Payment Flow:

1. User views billing summary
 2. Selects payment method
 3. Confirms payment
 4. System simulates processing
 5. Payment status is updated
-

Step 7: Admin Panel

The admin panel is used to manage the entire system.

Admin Capabilities:

- View all customer bookings
- Update order statuses
- Manage user accounts
- Track payments

- View analytics dashboard
- Filter and search orders
- Generate reports

Admin Dashboard Includes:

- Revenue charts
 - Order statistics
 - Service distribution graphs
 - Recent activity logs
-

4. Key Features Summary

✓ User Features

- Account creation & login
- Service booking system
- Real-time order tracking
- Online payment simulation
- Order history access
- Notifications system

✓ Admin Features

- Order management
 - Status updates
 - User management
 - Analytics dashboard
 - Payment tracking
-

5. Data Flow

1. User registers → Data stored locally
2. User logs in → Session validated
3. Booking created → Stored with unique Order ID
4. Admin updates order → Status changes reflected
5. Tracking page reads updated status
6. Payment processed → Transaction stored

6. Future Enhancements

- Mobile App version (Android/iOS)
 - Live GPS tracking of pickup agents
 - Loyalty and rewards system
 - Real-time chat support
-

7. Conclusion

The **Eco Dry Cleaners platform** is a complete digital solution designed to modernize laundry services by integrating booking, tracking, and payment into one seamless system.

It improves:

- Customer convenience
- Operational efficiency
- Service transparency
- Business scalability
